Corvus ATX - The 3D-Printed Voron-Inspired Computer Case!

What if the **Voron Design** team decided to stop making 3D printers and build a PC case instead?

Spoiler: THEY DIDN'T! This is not an official Voron project... but it might be what it would look like if they did. Corvus ATX is a 3D-printed, extrusion-framed computer case inspired by the clean, modular, and open-source ethos of Voron printers. Designed to house a full custom streaming workstation, it blends maker aesthetics with real-world PC hardware needs. The Case can fit a 199mm tall Air Cooler Tower and a 400mm long GPU (approximately). Standard ATX power Supply fits in the basement. Files include mounting for 140mm & 60mm exhaust fans, as well as 3x 120mm top mounted fans. Blank acrylic panel DXFs are included for adding additional fans to or using as windows.

KITS ARE COMING! Preorder a hardware / extrusion kit from:

- **West3D (USA)** (affiliate link)
- **Fabreeko (USA)**
- **DREMC (AUS)**

Updated 10/05/2025:

- Added Front Skirt Parts for use w/ PCB Front Button Mod, found here: **V.PC Basic Frontpanel PCB**
- Added Front Panel w/ 2x 140mm Fan Holes
- Enlarged Panel Fan mounting screw holes to 5mm to allow Case Fan Screw use, (or M3 screws)
- Adjusted Fan Grilles to better fit M3x35mm Screws
- Adjusted Top Acrylic Panels to be uniform between Top Hat & No-Top Hat. (1 Size Fits Both Now!)
- Fusion / STEP Files updated to reflect changes.
- Added Files I somehow missed (Door Handles / Top Hat / Etc)

See the full YouTube Video about this design here:

Credit:

- **@DonaldSayer** - Originator of this design, laid the ground work to make it happen.
- **Voron Design Team** - Inspiring makers in ridiculous ways since... idk, a while...
- quattroerik - Door Hinges remixed for this project: [LINK](#)

Features

- **Voron-Inspired Construction** - 2020 aluminum blind joint extrusion skeleton, acrylic panels, and a lot of 3D-printed parts.
- **Standard PC Layout** - Supports ATX motherboards, GPUs, PSUs, water-cooling gear, and accessories.
- **Water-Cooling Friendly** - Mounts for radiator, distro plate, pump/reservoir, and hardline tubing.
- **3D Printing First** - All panels, brackets, and mounts printable on common beds (Prusa MK4, Bambu X1, etc.).
- **Customizable Aesthetic** - Change colors, panels, or remix the CAD to your own sizing.
- **Mods** - Compatible with various Voron Mods (LED mounts, etc)

What's Included in the Download?

- Core Frame Brackets & Mounts (Motherboard tray, PSU mount, GPU support)
- Panel & Skirt Files (Side panels, bottom skirts, feet)

- Accessory Parts (Fan brackets, drive mounts, RGB channels)
- STEP & F3D Files – For easy remixing/customization

Print Settings & Recommendations

- **Nozzle:** 0.4 mm
- **Layer Height:** 0.2 mm
- **Walls:** 4+ perimeters for strength
- **Top/Btm Layers:** 6+ for rigidity
- **Infill:** 40%+ (Rectilinear, Gyroid, or Cubic recommended)
- **Material:** ABS/ASA (best), PETG, or PLA+ probably fine...
(Approximately 2.6kg required.)
- **Support-Free** (Some can help on obvious parts, but aren't required.)

Hardware Required (Full BOM Coming... Soon... tm)

- 2020 Aluminum Extrusion (8x 400 mm + 4x 200 mm default spec)
- M5 Button Head Screws
- M5 Roll-In Nuts
- M3 Button Head Screws (2x this kit as you need a lot of M3x8)
- M3 Roll-In Nuts
- M3 Hammerhead T-Nuts
- Acrylic Panels (Laser cut or CNC'd)
- M3 Heat Inserts (standard Voron Size: M3x5x4)
- 2x Mechanical Keyboard Switches
- 2x 5mm LEDs
- PC Hardware
- 1mm Foam Tape
- VHB Tape
- 6mm x 3mm Magnets
- West3D “Builder Kit” Should have enough hardware.
- Approximately 2.6kg of Filament (Depends on the optional prints & colors you choose.)

⚠ Notes & License

- **Not an official Voron project** — just heavily inspired by their design philosophy.
- GPL-3 Open Source License - Please support those who make these projects possible.
- Remixing encouraged, just credit and link back.

If you build one, tag me @MandicReally — I'd love to see it in the wild!
